

Nucamp SoloAI — Course sequence submission report

Repository: nucamp_soloai (SvelteKit + TypeScript)
Purpose: Instructor / Claude Code review against course submission criteria
Updated: 2026-05-02

How to view the PDF: Use Preview, Adobe Reader, or your browser. IDEs often display PDF bytes as pseudo-text—that will look broken.

Submission criteria checklist

Criterion	Status	Evidence (repo paths)
Refactoring report	Documented §1	Analytics/consent, Tailwind/Vite/DaisyUI, testing guides
Automated testing	Vitest PASS (snapshot §2)	<code>npm run test:unit -- --run ; Playwright: npm run test:e2e</code>
Claude Code sub-agents	8 roles committed §3	<code>.claude/agents/*.md</code> , <code>docs/SA01-Claude-Code-SubAgents.md</code>
UI polish	§4	Page transitions (flagged), Tailwind tokens, DaisyUI
Final integration	§5	Paraglide + Better Auth + Stripe/Lemon

1. Refactoring report — resolved issues and improvements

Evidence-backed improvements:

Analytics and consent

- `src/lib/analytics/dataLayer.ts` , `consentHeadScript.ts` , `gtmBootstrap.ts` , `klaroConfig.ts`
- Layout: `src/routes/+layout.svelte` , `+layout.server.ts` , `src/lib/components/tracking/*`

- Events / masking: `src/routes/login/+page.svelte` , `signup/+page.svelte` , `account/+page.svelte`

Documentation

- Billing/analytics criteria: `docs/code-review-billing-analytics-criteria.txt`
- Testing workflow: `docs/TS00-Data-TestID-Primer.md` ... `docs/TS05-Write-Basic-Tests.md`
- Refactor backlog prompt: `docs/REFACTORING-Master-Task-List.md`

Toolchain

- Tailwind v4 CSS entry: `src/app.css` — `@import "tailwindcss" + @config './tailwind.config.js'`
- Vite: `@tailwindcss/vite` in `vite.config.ts`
- PostCSS: `postcss.config.js` — `autoprefixer` only (Tailwind via Vite)
- **DaisyUI** installed as `devDependency` (fixes prior dev-server `Cannot find module 'daisyui'`)

Svelte / GTM

- Inline consent/GTM snippets use string concatenation and split `</scr + ipt>` so the compiler does not terminate `<script>` early: `ConsentHead.svelte` , `GoogleTagManager.svelte`

Ongoing

- Prioritized backlog: use `docs/REFACTORING-Master-Task-List.md`
- CI: `.github/workflows/ci.yml` — extend with `npm run check` and tests when ready

2. Automated testing — pass / fail output

Vitest (unit)

```
Command: npx vitest run
Result:  PASS (snapshot 2026-05-02)
Test Files  7 passed (7)
Tests      20 passed (20)
```

Files include: `src/lib/server/stripe/stripe.test.ts` , `billing/payment-provider.test.ts` , Lemon/Mautic helpers, etc.

Playwright (E2E)

```
Command: npm run test:e2e
Expected when green: 12 passed (routes smoke, /account redirect, language
switcher, 404 page)
```

Re-run locally before upload (`playwright.config.ts` starts `npm run dev`).

Typecheck

```
npm run check
```

3. Claude Code sub-agents — specialist definitions

Repo-stored roles (definitions for the Claude Code agent panel):

#	File	Focus
1	<code>.claude/agents/database-prisma.md</code>	SQLite auth, JSON billing, Prisma if adopted
2	<code>.claude/agents/auth-security.md</code>	Better Auth, webhooks, secrets
3	<code>.claude/agents/ui-component.md</code>	Svelte 5, Tailwind, DaisyUI, a11y
4	<code>.claude/agents/api-services.md</code>	<code>+server.ts</code> , Strapi/OpenAI
5	<code>.claude/agents/payment-systems.md</code>	Stripe, Lemon, locale checkout
6	<code>.claude/agents/il18n-translation.md</code>	Paraglide, <code>messages/*.json</code>
7	<code>.claude/agents/testing.md</code>	Vitest, Playwright
8	<code>.claude/agents/deployment-build.md</code>	CI/CD, build

Index: `docs/SA01-Claude-Code-SubAgents.md`

Note: Active vs completed tasks are tracked in the **Claude Code UI**, not in git. These files are reusable prompts.

4. UI polish — transitions, responsive layout, tokens

- **Transitions:** `docs/A08-Page-Transitions.md` ,
`src/lib/components/PageTransition.svelte` , wired in `+layout.svelte` ; enable with
`PUBLIC_PAGE_TRANSITIONS_ENABLED=true`
- **Layout:** `src/routes/+layout.svelte` — flex shell, `#main-content` , skip link

- **Tokens:** `src/app.css` :root variables; `tailwind.config.js` — `brand`, `surface`, breakpoints (`xs`, `3xl`)
 - **Components:** DaisyUI + `@tailwindcss/forms` + `@tailwindcss/typography`
-

5. Final app integration — multilingual, auth, monetization

i18n: Paraglide — `messages/*.json`, `src/hooks.server.ts`, `src/lib/paraglide/`

Locale payments: `src/lib/server/billing/payment-provider.ts` — `en` → Stripe, other locales → Lemon Squeezy

Auth: Better Auth — `src/lib/auth.ts`, `auth-client`, `/login`, `/signup`, `/account`

Monetization: `src/routes/pricing/*`, `src/routes/api/stripe/*`,
`src/routes/api/lemonsqueezy/*`, billing JSON via `src/lib/server/stripe/billing-store.ts`

6. Production-readiness caveats

Course “production-ready” ≠ enterprise launch checklist. Remaining hardening may include: managed DB for billing, full CI gates, CSP tuning, vault-held secrets, monitoring.

7. Files to upload

Format	Path
Recommended PDF	<code>docs/COURSE-SUBMISSION-REPORT.pdf</code> — run <code>npm run pdf:submission</code>
Plain text	<code>docs/SUBMISSION-COURSE-SEQUENCE-READINESS.txt</code>
Optional full bundle PDF	<code>npm run pdf:submission-bundle</code> → large appendix
